

Huseyn Khalil

FRONT-END SPECIALIST

Baku, Azerbaijan

mazegitt@gmail.com

github.com/mazegit1

linkedin.com/in/huseyn-khalil-7022262bb

// TECHNICAL CAPABILITY MATRIX

Core Layers

TypeScript, JavaScript (ES6+), Java, SQL

State & Processing

Zustand, Redux Toolkit, React Query, Node.js

UI Frameworks

React.js, Next.js (App Router), Tailwind CSS

Tooling & Deploy

Git, Vite, pnpm, Component Libraries (Shadcn/Radix)

// METHODOLOGIES & ARCHITECTURE

Development Philosophy

Component-Driven Development, Semantic HTML, Clean Code

Performance Optimization

Code Splitting, Image Optimization, Bundle Minimization

// PRODUCTION EXPERIENCE LOGS

Front-end Specialist / Developer

Safavy & High Result Academy

2025 - Present

- Architected high-performance web applications using Next.js and TypeScript, minimizing load benchmarks and maximizing layout stability metrics.
- Designed modular component layouts with strict typing integrations and smooth Framer Motion processing frames.
- Built functional client-side architectures interacting cleanly with remote API routers and payload models.
- Refactored legacy UI sections to modern Tailwind CSS configurations, drastically reducing CSS bundle footprint sizes.
- Collaborated closely with backend systems engineers to synchronize interface data models with JSON schemas.

// DEPLOYED SYSTEM NODES

Course Management Platform

Next.js // Node.js // Tailwind CSS

- Engineered an automated institutional space managing real-time student indexing, secure tuition transaction tracing pipelines, and attendance analytics.
- Built fully responsive administration dashboards utilizing highly scannable grid layouts and interactive tabular charts.

Internship Management Pipeline

Java // Next.js // TypeScript

- Developed a decoupled architecture binding a structured Java server endpoint array to a lightweight, responsive developer panel interface.
- Integrated secure client-side state handling using lightweight context strategies to prevent duplicate API dispatch chains.

Self-Directed Technical Engineering	Independent Studies	Ongoing
• Deeply focused on advanced computer science fields including systems logic, discrete mathematics, and algorithmic complexity mapping. • Investigates low-level computing architectures and component electronics data streaming principles.
